

## Retinal Photography

We are fortunate to have a medical device in this clinic that enables us to capture a digital image of the inner lining of the eye called the retina. Retinal imaging allows us to document a variety of defects, abnormalities, scars, hemorrhages and diseases. It is extremely important to have this procedure if you have a medical condition like; Diabetes, Hypertension (High Blood Pressure), or any other disease that affects blood vessels or neural tissue. Most insurance companies recognize the importance of the documentation and will pay for it. Unfortunately, not all will. It is a quick and painless procedure. The images are a wonderful reference point for our doctors to compare future retinal evaluations. For this reason, we feel everyone should have this procedure done. If you are healthy, we recommend imaging every 3-4 years, but, if you have a disease like Diabetes or High Blood Pressure, you may need it annually. If your insurance company will pay for this procedure, we will bill them the usual customary charge. However, if your insurance company does not pay for this procedure, there will be an additional charge of **\$20.00 per eye**. Payment is expected on the day the imaging is performed. Please indicate below if you would like to have this procedure done.

I accept retinal imaging today

I want to reschedule retinal imaging for another date & time

I decline retinal imaging today.
